

# Multiport Inlet Unit

TAKE CONTROL WITH LOS GATOS RESEARCH

## Need your analyzer to automatically control multiple input sources?

The Multiport Input Unit is an external box with either 8 or 16 solenoid valve input ports that can be controlled by any Los Gatos Research continuous gas analyser. The ports are programmed at the analyser which allows for any port to be selected for input at any time. Once programmed the measurements of the different samples or reference gas cylinders are fully automated.

### FEATURES AND BENEFITS

- Programmable
- Automated operation
- Analyser controlled
- Allows unattended, fully automated monitoring of multiple sources
- Controlled by and used with a Los Gatos Research continuous gas analyser
- 16 ports for up to 16 input sources
- Only 10 Watts of power

### PERFORMANCE SPECIFICATIONS

Number of inputs:	8 (MIU-8) 16 (MIU-16)
Power requirements:	10 Watts 115/230 VAC; 50/60 Hz
Dimensions:	330mm x 110mm x 435mm
Inlet/Outlet Fittings:	1/4 inch outside diameter building
Weight:	10.5 pounds (4.8kg)
