# Urban Air Quality Monitoring

# Ambient Air Quality Monitoring Urban Air Quality Monitoring

To measure air quality in the ambient air can be a challenge. The monitoring site needs to be representative and not dependant on changes in local traffic. A large number of gaseous components need to be measured with high accuracy and high availability.

The OPSIS DOAS system is different and provides the user with a fast system that gives high availability at low cost.

The OPSIS system is based on a non-contact DOAS method, using an optical path. The optical light is transferred in an optical fibre to the analyser and one analyser can operate several paths.

A single OPSIS system can measure all relevant gaseous components, such as NO, NO<sub>2</sub>, SO<sub>2</sub>, O<sub>3</sub>, BTX, HNO<sub>2</sub>, NO<sub>3</sub>, formaldehyde, and NH<sub>3</sub>.

## RETURN OF INVESTMENT

The cost of investing in an OPSIS system is small compared to the money that are spent on maintaining old and complex conventional analysers.

The OPSIS system has low cost of ownership based on few moving parts, long intervals between calibrations, easy operation and low energy consumption.

## TEST AND APPROVALS

The OPSIS system has been tested and approved by a number of international, recognized institutes and authorities, for example TÜV and MCERTS.

The system meets and exceeds the requirements in U.S. EPA and EN 15267.

## OPSIS PRODUCT PORTFOLIO

OPSIS has a full product portfolio for measurement of gases in a range of applications. The basic air quality monitoring system, can be extended to include a range of additional features, such as

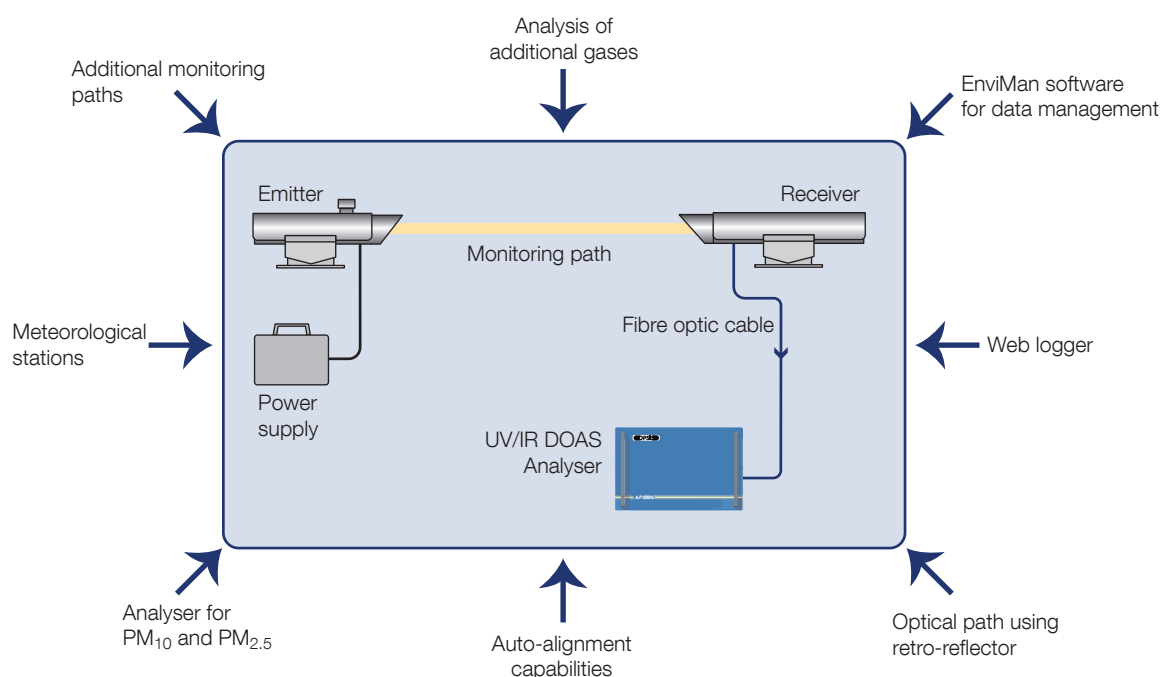

- EnviMan software for data management
- Meteorological stations
- Analyser for PM<sub>10</sub> and PM<sub>2.5</sub>
- Manual and automatic calibration
- Auto-alignment capabilities
- Automatic dust sampler of PM<sub>2.5</sub> and PM<sub>10</sub>
- Additional monitoring paths
- Analysis of additional gases
- Web transfer unit that enables clients to download data automatically and simultaneously, independent of where they are located
